**Re:** 2008 CPT Codes

---

There are no 2008 CPT code updates that will require modification of the Avera Laboratory Network test catalog.

There is a proposed change to the CPT coding of Glycosylated Hemoglobin A1C testing. CMS is proposing to create a Gxxxx code to apply to all government reimbursed testing for Glycosylated Hemoglobin A1C procedures. This Gxxxx code would be used in place of CPT codes 83036 and 83037. CPT codes 83036 and 83037 would still remain active, but used only for non-government and private pay reimbursement. If and when this proposal becomes final, a notice will be sent out by the Avera Laboratory Network to all clients.
